The difficulties faced with the limited or incomplete information provided to take regulatory decisions. Panel: TBC Proposed questions for the discussion: - Minimal magnitude of safety signals triggering regulatory action in pre-marketing and post-marketing phase. - Is it possible to cope with regulatory uncertainties using RWE (RWD), such as registries? If not, what is the way out? - How can academia provide a meaningful, significant, and relevant input for hepatotoxicity related regulatory issues? - Why we still do not have biomarker for liver toxicity compared to renal toxicity? Is the risk for hepatotoxicity well managed using AST/ALT? - Can genetic data be the answer for DILI prediction?
